

```

# 1. Docker (one-liner)
git clone https://github.com/Kmmadu/NetPulse.git && cd NetPulse && cp network-monitor/.env.example network-monitor/.env

# 2. Linux install
git clone https://github.com/Kmmadu/NetPulse.git
cd NetPulse
./install.sh
nano network-monitor/.env

# 3. macOS install
git clone https://github.com/Kmmadu/NetPulse.git
cd NetPulse
python3 -m venv venv
source venv/bin/activate
pip install -r network-monitor/requirements.txt
cp network-monitor/.env.example network-monitor/.env
nano network-monitor/.env
cd network-monitor
python api_run.py &
cd web
python3 -m http.server 8080 &

# 4. Windows install (PowerShell as Admin)
git clone https://github.com/Kmmadu/NetPulse.git
cd NetPulse
python -m venv venv
.\venv\Scripts\activate
pip install -r network-monitor/requirements.txt
copy network-monitor\.env.example network-monitor\.env
notepad network-monitor\.env
# Then open two terminals:
# Terminal 1: cd network-monitor && python api_run.py
# Terminal 2: cd network-monitor\web && python -m http.server 8080

# 5. Email config (.env)
SMTP_SERVER=smtp.gmail.com
SMTP_PORT=587
SMTP_USERNAME=your-email@gmail.com
SMTP_PASSWORD=your-app-password
SMTP_FROM=your-email@gmail.com
SMTP_TO=alerts@yourdomain.com
ALERTS_ENABLED=true

# 6. First run
open http://localhost:8080
# Register -> Login -> Add Device -> Start Monitoring

# 7. Troubleshooting
sudo fuser -k 8000/tcp # kill port 8000
sudo journalctl -u netpulse-api -f # view API logs
cd network-monitor && python -c "from app.services.alert_v2 import AlertServiceV2; AlertServiceV2().send_notification('test', 'test')" # test API
sqlite3 network-monitor/data/monitor.db "SELECT * FROM devices;" # check DB
ping 8.8.8.8 # test connectivity

```
